

Good Morning

I was never involved in a Blogging process but actually, I have been involved in at least 15 onsite contests before, so I can really think about what the online and the onsite audience like to see in the Blogs and the newsletters.

News

The most important issue in this process is surely the news and statistics. So, in an onsite event I like to be among the crowd from the very morning until the last moment of the day, so that I do not miss anything. So, I think that I can get every single action that is happening and pass all the information to our audience through the Blogs. Also, do not worry about photos and videos; I know that the fans of every contestant like to see him in the important moments.

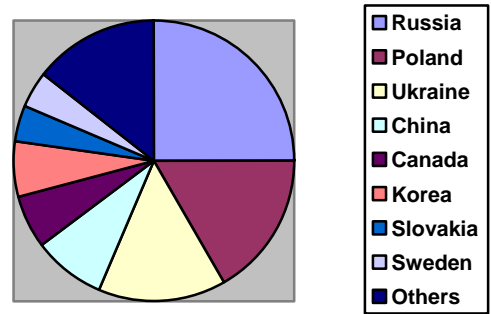

Thanks for my friend Christina for drawing this for me

Languages

Regarding languages, I can speak English and French fluently. I have been studying both languages in my school for 13 years and then 5 years of computer Engineering studies in English at my University. I like usually to add some sort of sarcasm to my articles and photos. I know surely that the audience doesn't like arguments like "Giving up smoking is very easy, I have even done it 40 times before"©. I think that I have good arguments better than this.

Statistics

Also, I think that we may start our blogs early giving some numbers, surveys and questionnaires that show the opinions of the qualifiers and famous TC members. I know that all TC members like statistics more than anything else. That's why statistics would be on the top of the priorities. I will try to record as much as I can concerning the event and the contest and make the required information available.

TCO 07 Algorithm Finalists

Contest Experience

As a contestant, I have participated in 4 ACM-ICPC regionals and 4 ACM-ICPC nationals. As Egyptian team leader, I have participated in the last couple of IOIs in Mexico and Croatia as well as ACM-ICPC finals in Japan 2007. Being a problemsetter, I also participated in the last 4 national Olympiads in my country.

Concerning TopCoder, I am a yellow coder in algorithm competitions here. My rating oscillates between 1800 and 2000 inclusive☺. I can give some notes about the problems in the Blogs (not like Petr notes sure) but anyways I consider myself familiar with TC problems style after participating in more than 130 rated events here.

By the way, I was quarter finalist in the last TCCC 2006.

I think that's all....Bye for now ☺
